

### 5.2.2 What is a logarithm?

Defining the Inverse of an Exponential Function

#### #63 Another Ancient Puzzle

Fill in the table with your teammates

$x$	8	32	$\frac{1}{2}$	1	16	4	3	64	2	0	0.25	-1	$\sqrt{2}$	0.2	$\frac{1}{8}$
$g(x)$	3		-1					6							

a. Describe an equation that relates  $x$  and  $g(x)$ .

b. Look back at the Ancient Puzzle in problem #54. If you have not already done so, use the idea of the Ancient Puzzle to write an equation for  $g(x)$ .

c. Why is it difficult to think of an output for the input of 0 or -1?

d. What is the output for  $x = 25$ , to the nearest hundredth?

e. Using your graphing calculator, graph  $y = 2^x$  and  $y = \log_2(x)$ . Carefully copy the graph here. How do the graphs compare? What do they have in common? What is different?

**#65** Calculate each of the values below, then justify your answers by writing the equivalent exponential form.

a.  $\log_2(32) = ?$

Exponential Form:

b.  $\log_2\left(\frac{1}{2}\right) = ?$

Exponential Form:

c.  $\log_2(4) = ?$

Exponential Form:

d.  $\log_2(0) = ?$

Exponential Form:

e.  $\log_2(?) = 3$

Exponential Form:

f.  $\log_2(?) = \frac{1}{2}$

Exponential Form:

**Review Practice:**

1) Given  $f(x) = 2(x - 1)^3 + 4$ ,

a. Write the equation for  $f^{-1}(x)$ .

b. Make a table for  $f(x)$  and  $f^{-1}(x)$ .

$f(x) \frac{x}{y}$		$f^{-1}(x) \frac{x}{y}$
--------------------	--	-------------------------

c. Graph  $f(x)$  and  $f^{-1}(x)$  on the same set of axes.
