

**5.2.4** What does a log graph look like?

Graphing Logarithmic Functions

**#93 GRAPHING THE LOGARITHMIC FUNCTION**

Sakura needs to graph  $y = \log(x)$ , but she does not have a calculator and needs your help.

a. Write the equivalent exponential equation for  $y = \log(x)$ .

b. Logarithms and exponents are related, but how? What is the inverse equation of  $y = 10^x$ ?

c. Make a table and sketch a graph of  $y = 10^x$ . State the domain and range.

Domain:

Range:

d. Use your table to and graph from part (c) to make a table and graph  $y = \log(x)$ . State the domain and range.

Domain:

Range:

e. Explain to Sakura a strategy she can use to graph  $y = \log(x)$ .

### #94 GRAPHING LOGARITHMIC FUNCTIONS IN DIFFERENT BASES

Work with your team to graph  $y = \log(x)$ ,  $y = \log_2(x)$  and  $y = \ln(x)$  on the same set of axes. Use your work from problem 5-93 as a guide. Be prepared to share your strategies and graphs with the class.

$$y = \log(x)$$

$$y = \log_2(x)$$

$$y = \ln(x)$$

With your team, study how the graphs of  $y = \log(x)$ ,  $y = \log_2(x)$ , and  $y = \ln(x)$  compare. For  $x > 1$ , how does  $\log_a(x)$  compare to  $\log_b(x)$  if  $b > a$ ?

### #95 TRANSFORMING LOGARITHMIC FUNCTIONS

Graph each of the following transformations. For each function, describe the transformation and state the domain and range.

a.  $y = 5\log_3(x)$

Describe Transformation:

x	
$\log_3(x)$	
$5\log_3(x)$	

Domain:

Range:

b.  $y = \log_{0.5}(x) - 2$

Describe Transformation:

x	
$\log_{0.5}(x)$	
$\log_{0.5}(x) - 2$	

Domain:

Range:

### #95 Continued

c.  $y = \log_2(x - 3)$

Describe Transformation:

x	
$\log_2(x)$	
$\log_2(x - 3)$	

Domain:

Range:

d.  $y = -\log_4(x)$

Describe Transformation:

x	
$\log_4(x)$	
$-\log_4(x)$	

Domain:

Range:
