

Expressions and Equations**LEARNING PLAN**

(Chapter 3)

Skill/Understanding:	Review/Practice Problems
<p>Rational Expressions</p> <ul style="list-style-type: none"> <input type="checkbox"/> I can rewrite the numerator and denominator of a rational expression in factored form. <input type="checkbox"/> I can identify giant ones to help simplify rational expressions. <input type="checkbox"/> I understand that I cannot “cancel” terms when the numerator and denominator are in standard form. <input type="checkbox"/> I can rewrite a rational expression with addition and/or subtraction so that each term has a common denominator (multiply each term by a giant one). <input type="checkbox"/> I can add and subtract rational expressions. <input type="checkbox"/> I can multiply and divide rational expressions <input type="checkbox"/> I can identify which values need to be excluded (cause division by zero). <input type="checkbox"/> I can write a partial fraction decomposition as in lesson 3.1.1. 	<p><u>3-12</u>, <u>3-13</u>, <u>3-30</u>, <u>3-42</u>, <u>3-56</u>, <u>3-78</u>, <u>3-109 (a) and (b)</u>, <u>3-137</u>, and <u>CL 3-147 (a) and (b)</u>.</p> <p>Lesson 3.1.1</p>
<p>Complex Fractions</p> <ul style="list-style-type: none"> <input type="checkbox"/> I can multiply a complex fraction by a giant one so that it is no longer a complex fraction. <input type="checkbox"/> I can simplify complex fractions completely. 	<p><u>3-28</u>, <u>3-42 (d)</u>, <u>3-73</u>, <u>3-109 (c)</u>, and <u>CL 3-147 (c)</u>.</p> <p>Lesson 3.1.2</p>
<p>Polynomial Division</p> <ul style="list-style-type: none"> <input type="checkbox"/> I can divide polynomials using an area model. <input type="checkbox"/> When I have a remainder using polynomial division I can represent the remainder as a fraction. 	<p><u>3-54</u>, <u>3-70</u>, <u>3-95</u>, <u>3-136</u>, and <u>CL 3-149</u>.</p> <p>Lesson 3.1.4</p>
<p>U-substitution</p> <ul style="list-style-type: none"> <input type="checkbox"/> I can use u-substitution to rewrite complex fractions so that it is easier for me to factor. <input type="checkbox"/> I can use u-substitution to rewrite and solve complex equations. 	<p><u>3-29</u>, <u>3-55</u>, <u>3-79</u>, and <u>CL 3-146</u>.</p> <p>Lesson 3.1.2</p>
<p>Systems of Equations</p> <ul style="list-style-type: none"> <input type="checkbox"/> I can solve systems of equations using elimination. <input type="checkbox"/> I can solve systems of equations using substitution. <input type="checkbox"/> I can solve non-linear systems of equations. <input type="checkbox"/> I can check my solutions to see if any solutions are extraneous. 	<p><u>3-17</u>, <u>3-35</u>, <u>3-41</u>, <u>3-71</u>, <u>3-108</u>, <u>3-124</u>, and <u>CL 3-148</u>.</p> <p>Lesson 3.1.3</p>

PRACTICE PROBLEMS:

Complete the following problems on a separate piece of paper.

1) Simplify:

a. $(x + y) \div \left(\frac{1}{x} + \frac{1}{y}\right)$ b. $\frac{x}{x+y} - \frac{x-y}{x}$ c. $\frac{3x^{-3}+4x}{2x-x^{-2}}$

2) Complete the following division problem. Express any remainder as a fraction.

$$\frac{2x^3+x^2-19x+36}{x+4}$$

3) Solve for x and give answers in exact form:

a. $(3x - 2)^2 + 8(3x - 2) + 12 = 0$ b. $x - 6x^{1/2} + 4 = -5$

c. $2xy + 5 = x - 4y$

4) Solve the system of equations:

$$x^2 + y^2 = 74$$

$$x^2 - y^2 = 24$$

5) Complete a partial fraction decomposition for $\frac{8x+7}{(x+2)(x-1)}$.
